

AI Deep Learning: NLP: GCP: Dialogflow CX HOWTO: Enable API & Create Agents

Thuan L Nguyen, Ph.D.

1. Get Free-Credit and Create Project in GCP

See the document: [gcp_get_free_credit.pdf](#)

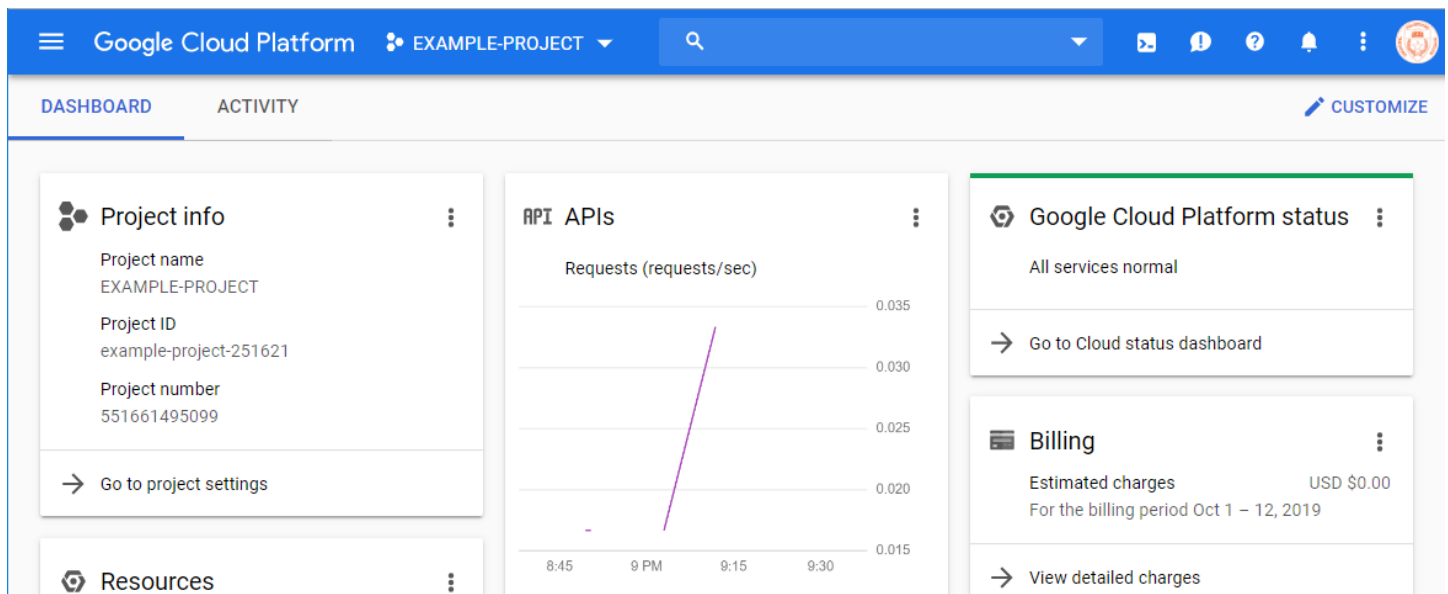

IMPORTANT NOTES:

--> If the student has used GCP free credit before, it is very likely that he/she cannot get the free credit again.

--> In this case, the student has to pay for the GCP service that he/she uses. If the student manages the GCP usage well (stop the remote servers when he/she does not use them), the cost will be affordable.

2. Access GCP Console

- Open Chrome browser
- Type: [Google Cloud Console](#) into the URL search box

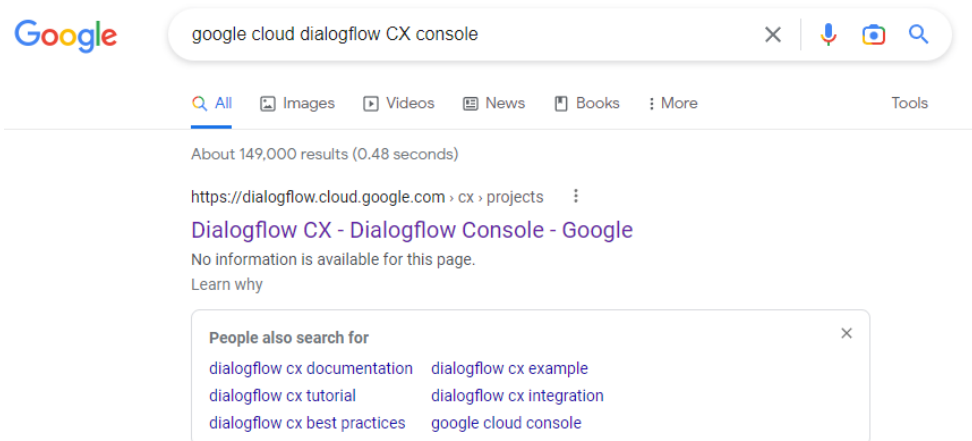

IMPORTANT NOTES:

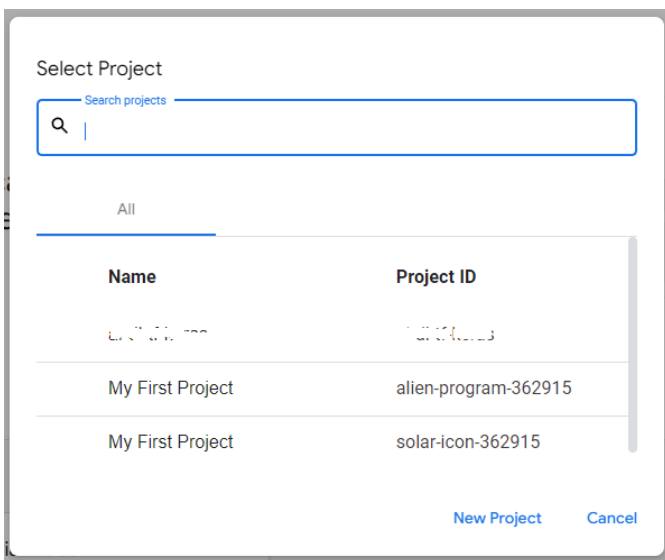

--> The student should be sure that billing on the project has been enabled and associated with the billing account that has the free-trial credits.

3. Access GCP Dialogflow CX Console

- Open Chrome browser
- Type: [Google Cloud Dialogflow CX Console](#) into the URL search box

Click to open: [Dialogflow CX – Dialogflow Console – Google](#)

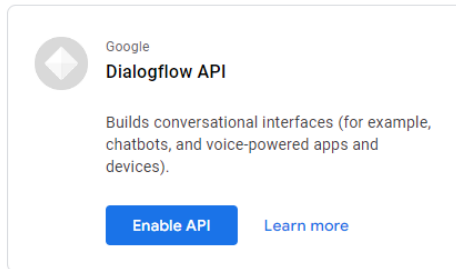

Click: The name of the project that has been created

Project Name

To use Dialogflow CX with this project,
enable the following APIs

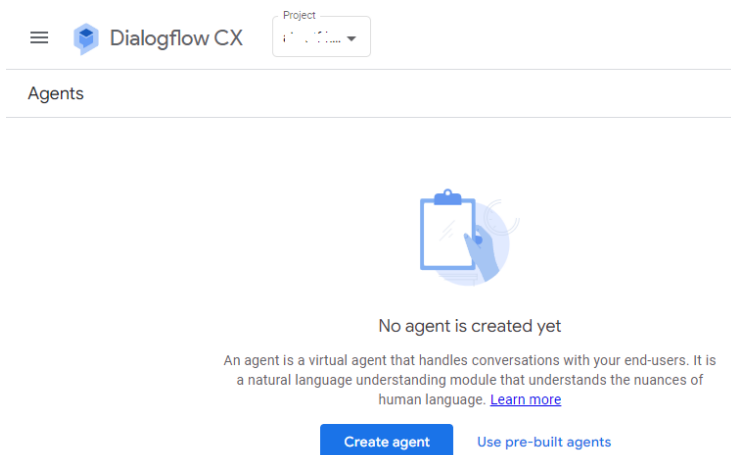

Click to enable: [Enable API](#)

... Wait for the API to be enabled ...

Click to [refresh](#) the browser page

4. Create Dialogue Agent

Click to create: [Create agent](#)
